

“Triple Protection” Slam Elimination (an Industry Exclusive)

Mechanical Speed Reducer

Far superior to the liquid filled speed reducer used by competition, our optional speed reducer can never leak and is not affected by temperature.

Dampened Spring

New for 2009! The Wizard spring contains a special, dense dampening compound which slows the spring's action and allows the screen to retract slower. This compound also permanently lubricates the spring and eliminates the annoying spring squeak noises.

Silicone Injected Pull Bar Caps

Another Wizard innovation. The pull bar caps are silicon injected. This allow smoother action, so we do not have to wind the springs as tight as our competitors. The Wizard pull bars retract slowly and smoothly.
